

# Absolute encoders – multiturn

**Standard, ATEX/IECEx – mining  
mechanical multturn, optical**

**Sendix 7163 / 7183 (shaft / hollow shaft)**

**SSI/BiSS**

## Compact and safe

- Can be used even when space is tight.
- Minimal installation depth, diameter 70 mm.
- Compact cable outlet axial or radial.
- Remains sealed even in harsh everyday use and ensures highest safety against field breakdowns (IP67 protection).

## Explosion protection

- Mining approval.
- “Flame-proof enclosure” construction.
- ATEX with EC type examination certificate.
- IECEx with certificate of conformity (CoC).

<b>Resolution singleturn</b>		Input current < 0.5 mA		
<b>Number of revolutions (multiturn)</b>		Min. pulse duration (SET) 10 ms		
<b>Code</b>		Timeout after SET signal 14 ms		
<b>SSI clock rate</b>		The encoder can be set to zero at any position by means of a HIGH signal on the SET input. Other preset values can be factory-programmed.		
50 kHz ... 2 MHz		The SET input has a signal delay time of approximately 1 ms. Once the SET function has been triggered, the encoder requires an internal processing time of approximately 15 ms before the new position data can be read.		
<b>Data refresh rate</b>		If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.		
ST resolution ≤ 14 bit ≤ 1 µs				
ST resolution ≥ 15 bit 4 µs				
<b>Monoflop time</b>				
≤ 15 µs				
<b>Note:</b> if clock starts cycling within monoflop time a second data transfer starts with the same data. If clock starts cycling after monoflop time, the data transfer starts with updated values. The update rate depends on clock speed, data length and monoflop time.				
<b>BiSS interface</b>		<b>DIR input</b>		
<b>Output driver</b>		Direction input: A HIGH signal switches the direction of rotation from the default cw to ccw. This inverted function can also be factory-programmed.		
<b>Permissible load / channel</b>		If DIR is reversed when the device is already switched on, this will be interpreted as an error. The status output switches to LOW.		
<b>Signal level</b>		If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.
